Vision

We believe true success lies beneath good underpinning at the seed level. Social and economic growth go hand in hand with the development of ideas that can only be nurtured by sufficient financial and nonfinancial resources.

Mission

Our company lays down a podium which will make people independent earner with rational bill solution mode at their discretion The potential projects with futuristic pertinence will be accessible by each type of solution.

WHAT IS USDT

Tether (USDT) is a block chain-based crypto currency whose tokens in circulation are backed by an equivalent amount of U.S. dollars, making it a stable coin with a price pegged to USD \$1.00. Stable coins track traditional fiat currencies, like the dollar, the euro, or the Japanese yen, which are held in a designated bank account.

Tether belongs to a breed of crypto currencies called stable coins which aim to keep crypto currency valuations stable, as opposed to the wide swings observed in the prices of other popular crypto currencies like Bitcoin and Ethereum. That would allow it to be used as a medium of exchange and a mode of storage of value, instead of being used as a medium of speculative investments.

Tether is useful for crypto investors because it offers a way to avoid the extreme volatility of other crypto currencies. Furthermore, having USDT (as opposed to the U.S. dollar) removes transaction costs and delays that impair trade execution within the crypto market.

BNB SMART CHAIN

Smart contracts are simply programs stored on a blockchain that run when predetermined conditions are met. They typically are used to automate the execution of an agreement so that all participants can be immediately certain of the outcome, without any intermediary's involvement or time loss

BLOCKCHAIN TECHNOLOGY

Block chain technology is a structure that stores transactional records, also known as the block, of the public in several databases, known as the “chain,” in a network connected through peer-to-peer nodes. Typically, this storage is referred to as a ‘digital ledger.’

Every transaction in this ledger is authorized by the digital signature of the owner, which authenticates the transaction and safeguards it from tampering. Hence, the information the digital ledger contains is highly secure.

DECENTRALIZATION

What is decentralization? What are its benefits and advantages? Decentralized marketing is created on an automated contract that guarantees you maximum security and stability.

A smart contract is an algorithm with automatic execution. It exists inside the Smart Chain block chain, which is one of the top crypto currencies. Smart contracts, like crypto currencies themselves, are decentralized. They work strictly according to a certain program, and once they are launched, it is impossible to change their mode of operation. The code that determines the logic of a smart contract is written in a block chain, and all calculations are performed by millions of computers around the world. This ensures that a smart contract cannot be hacked or stopped.

We Offer Best In Class Service

For Your Needs

Efficiency

METABLAST developing transparent user policies with regards to the coin listing process, trading fee structure, airdrops and forks, so traders can anticipate how to deal with these events

Market Research

METABLAST provides users with extensive market research tools which include data analytics, trading strategies, trade signals, crypto currency news, social feeds and real-time coin announcements.

Fast Transaction

Your personal eWallet - online transfers, payment acceptance, electronic currency exchange.

HOW TO START META BLAST

System work on USDT + BNB SMART CHAIN

 MetaBlast
